POTTED FLOWER PLANTS		Sweet William, Mixed.....	113		
Geraniums, Daisies, Cannas, Petunias, Fuchsias, Begonias, Lobelia and other plants suitable for window boxes or bedding out.		Veronica, Blue Spikes.....	114		
		Yellow Marguerite.....	115		

Suitable for Rock Garden

Number
of
Trees
Wanted

The **Junipers** and **Arbor Vitaes** can be trimmed to prevent spreading or growing too tall.

Don't forget to visit the nursery during the month of June when thousands of perennials are in bloom, and in July and August when many varieties of Hardy **Phlox** are in bloom. A good display will be on hand each day from which to select.

Many annuals are in bloom at the nursery during the summer months. If your garden is not complete, you can get **Petunias, Verbenas, Bachelor's Buttons, Pinks, Marigolds, Lobelias, Snapdragons, Zinnias, etc.**, all in bloom, just what you need to fill up that vacant space in the garden.

Perennials should be protected in winter with a covering of three or four inches of straw. Cover in the fall when the ground starts to freeze.

Our black dirt is nearly all humus. Humus is decayed vegetation and decayed vegetation is nature's fertilizer. Nothing of importance will grow without it. Decayed vegetation produces a rank growth of new vegetation wherever used, in flower pots, window boxes, flower beds, gardens or lawns.

Dirt properly mixed with humus and fertilizer for use in window boxes.

The Black Dirt which we have been selling for many years is a product of an old lake bottom or peat bog. The accumulation of peat is the result of dead and decayed grasses, roots and other vegetable matter. It is similar to leaf mold which has long been considered of great benefit to soil.

Many of our customers who have been using this soil for a number of years have reported wonderful results by mixing it with other soil in their gardens; while those who just spread it on the top of the ground are not so successful. It is too light unless mixed with other soil. For window boxes use one-third peat mixed with other soil. For lawns, first mow the grass, then spread soil on about one inch thick and rake thoroughly. The grass roots soon take up the soil. If the lawn is poor, this can be done at intervals through spring, summer or fall. For using in rock gardens and terraces it prevents the soil from washing. For mixing with clay it softens the soil and prevents it from caking. It retains the moisture when used in sandy or gravelly soil.

**A good mixture of Clover, Redtop
and Kentucky Bluegrass.**

One pound will plant a square space of about 15 feet wide, or 225 square feet.

Steamed Bone Meal, 3 lbs.	20c
10 lbs.	50c
20 lbs.	90c
Wizard Sheep Manure, 3 lbs.	20c
10 lbs.	50c
25 lbs.	\$1.00
Vigoro, 12-oz. pkg.	10c
5-lb. pkg.	50c
10-lb. pkg.	85c
25-lb. bag	\$1.50
50-lb. bag	2.50
100-lb. bag	4.00

Vigoro is a highly concentrated fertilizer. It acts quickly and should be used in starting small plants. Spread on a coating of about 1 lb. to 3 or 4 square yards, and mix in the soil to a depth of 3 or 4 inches before setting in plants. Use it in connection with our Humus soil to start a more rapid growth.

We do not fill mail orders for less than \$1.00. Add 25c extra for postage and packing on \$1.00 order and 10c extra for each additional \$1.00.

This sheet will be returned with your order.

Name _____

Address _____

This is a view in one of the rock gardens at the nursery. It was taken in September, 1932, a few weeks after the garden was completed. There are about one hundred feet of irregular shore line around this pool. The garden can be viewed from any direction as a path leads entirely around the pool. This pool is fed by a winding stream flowing over waterfalls and through mossy banks from the pool of a smaller garden at a much higher elevation.

ROCK GARDENING AS A PASTIME

If you must have a hobby, try your hand at rock gardening. There is always something in nature that appeals to everyone. A rock garden built to represent nature is most fascinating. There is something in a well-built rock garden to interest everyone, the plants and flowers, the rocks, the water, water plants and fish, or the effect of the entire arrangement of the pool and the garden. Hills and valleys, streams and waterfalls representing in miniature what we have seen in nature make a grand display.

One might travel for days, and not find a spot so interesting as a carefully built rock garden on his own home grounds.

IT IS EASY TO MAKE A ROCK GARDEN

A rock garden should be something besides just a load of rock dumped on the ground with a little dirt thrown in between the rocks and a few plants added. To be fascinating a rock garden should represent something in nature. Who would care to see meadows and prairies covered with rock? But if we visit the mountains or steep banks of rivers or

lakes and fail to find ledges of rocks and boulders of all kinds, we would be disappointed.

It is on the mountain slopes and cliffs where we find the Alpine or rock plants growing, so let us make some mountains and valleys in miniature. If you wish a pool make it irregular to represent a lake with an island or peninsula, etc. Select a spot near the side or back of the lot line. Use some shrubs or evergreens for a background. Dig the pool about 18 to 24 inches deep, and cement the bottom and sides 4 to 5 inches thick. Use the dirt to shape the mountains and valleys around the pool. Leave enough open space in front for entrance to pool.

If the dirt is clay, add some sand or gravel to it, then mix in about 3 or 4 inches of our humus or peat soil. It supplies fertility and prevents the soil from washing. Dig pockets here and there and set your rock. Some prefer imported rock, but native rock is all right. Use the flat rock for cliff effect, boulders and odd shaped rocks on the slopes and foot hills. Then tamp the soil down between the rocks and set in the plants. Use some of the taller varieties near the pool.

Before starting your rock garden practice on a few tiny ones for models to get the shape you want. It will save time and produce some interesting results.
